

Advice for staff involved with administering the Coronavirus vaccine to blind and partially sighted people

We have put together these suggestions about how to assist people with sight loss when receiving the Covid-19 vaccine. This does not replace or override general guidance or policies

Sight loss is more common than you think

Some of those who are blind and partially sighted may already be known by various agencies. For example, they may be familiar to their GP practice. There are also people in the community whose sight loss is not recorded. If you are unsure, just ask the person you are supporting if they have any challenges due to poor eyesight.

Key recommendations

- Ensure information sent to a visually impaired person is available in an accessible format such as large print and braille.
- Provide clear information on the location of the vaccine centre, such as public transport options.
- Make sure the venue has clear signage and good levels of lighting.
- Ensure staff are trained to provide support to people with sight loss, such as providing verbal or sighted guiding where necessary.

Providing information in the correct format

When you are providing information in print, follow the [Minimum standards for clear and large print from the UK Association for Accessible Formats UKAAF](#). Ask the vision impaired person what format they would like the information provided in: large print, braille, audio or email. The following transcription services can help and are still operating during the pandemic:

[Ecom](#)
[a2i](#)

Other transcription companies are available and many of these are listed [on the UKAAF website](#).

Information about the location of the vaccine centre

The following information will help someone with sight loss plan their visit to the centre:

- Public transport options closest to the centre (appointments after 9.30am are likely to be preferred).
- Information about the centre's location and accessible entrance points including whether someone can be met outside the venue by a staff member.
- What to expect when arriving at the centre.

It is also important that staff be aware of the following:

- That many visitors will have conditions or disabilities that mean they may need further support.
- That all businesses and services have a duty to make reasonable adjustments for people with disabilities.
- That there are different types of [assistance dogs](#) and [different mobility canes](#).
- That any issues relating to access for someone accompanied by their guide dogs should be discussed with the guide dog owner and reasonable adjustment requirements should be followed.

Providing assistance at the vaccine centre

Talking to a blind or partially sighted person

The most important point to remember is to use clear verbal communication. The following tips may help:

- Gain the person's attention with a verbal greeting.
- Introduce yourself and what you do.
- Always talk to the person directly, rather than their sighted companion.
- Use verbal responses and avoid nods and head shakes.
- Verbalise your actions.
- Inform people when you are walking away from them or leaving the room.
- Remember that if someone is blind it doesn't always mean they have no sight at all.

- In a group conversation, always make it clear who you are and who you are speaking to.
- Provide printed information in an alternative/accessible way - digital, audio, large print or braille.
- Ask the person what support they require. If someone usually requires sighted guiding follow [the current guidelines](#).

Verbal Guiding

- When verbally guiding a person, ask them if they would like you to walk ahead, behind or on their left or right (2 metres distance). Their preference may allow them to use any remaining vision.
- Provide clear instructions when describing a route or when you would like the person to change direction e.g. 'left' and 'right'
- You may wish to use the 'clock face technique' when describing the environment in front of the person. For example, 'directly in front of you at 12 o'clock is the main entrance and to your right at 3 o'clock is a table. On your left at 9 o'clock is the toilet door'.
- Let the person know before you carry out any procedure that involves physical contact. For example, 'I'm going to touch your left arm', 'I need you to roll up your left sleeve', or 'Can I help you with that?'.
- It is important to make someone with sight loss aware of the environment they are in. This is particularly important when discussing personal information or administering any medical procedure in an open area where other people are present.
- When walking, always let the person know about differences in the floor surface, such as steps and any changes in surface such as when moving from tiles to a carpeted area.
- Inform the person of any obstacles near them that could be trip hazards or that they could accidentally bump into, such as furniture.
- Consider asking how the experience was for them or if there is anything that could have been done differently. If there is, this could not only benefit you but also the next person with sight loss for whom you provide assistance.

Providing sighted guiding assistance

“[Supporting people outside their home](#)” guidance allows for: support from family or friends in the same household; from their support bubble; or by family and friends that don’t live in the same household or support bubble. If that’s not possible, it allows support by volunteers or staff from organisations such as hospitals or similar settings. This includes sighted guiding.

Sighted guiding provides support for someone whose sight is not sufficient to safely negotiate an unfamiliar environment. Ordinarily it involves the person being guided whilst keeping light contact with a guider’s elbow and standing alongside and slightly behind the guider either to the left or right depending on personal preference. Whilst moving, the guider will also talk to the person being guided to provide additional information about any immediate hazards.

The organisation providing the support should:

- follow guidance for [working safely during coronavirus](#) to minimise risks for staff and customers;
- provide any necessary training and equipment to their staff;
- check the person being supported hasn’t got COVID-19 symptoms and hasn’t been advised to stay at home or quarantine themselves, before providing support; and
- maintain records of the people who have been supported by each member of staff for 21 days and be prepared to provide this information to NHS Test and Trace, if needed.

In addition, people needing sighted guiding support should:

- where possible, book support in advance;
- set out what support you need;
- be prepared to give their name and contact details; and
- if contacted by NHS Test and Trace, follow their advice.

Current guidelines on sighted guiding vary slightly depending on the specific public health advice in each country:

[Sighted guiding \(England\) - RNIB Guidance \(Word\)](#)

[Sighted guiding \(Wales\) - Public Health Wales](#)

[Social Distancing \(Northern Ireland\)](#)

[Sighted guiding \(Scotland\) - Scottish Government](#)

More information on sighted guiding can be found on the [Guide Dogs website](#).

Lighting

A Lighting Guide has been developed by Thomas Pocklington Trust to assist visually impaired people to improve lighting in their homes, increasing their independence, comfort and safety. Much of this advice is relevant to any settings where a person with a visual impairment may visit:

Face coverings, exemptions and social distancing wearables

It is important that staff are aware that disabled people, including people with sight loss, are exempt from wearing a face covering as these can impair their remaining useful vision. They may be carrying a card or badge to show they are exempt, but this is a personal choice and is not required by law. If a person informs a member of staff that they are exempt from wearing a face covering, staff should respect their explanation and allow them to enter.

Disabled people including people with sight loss, older people and people with mobility issues may also find social distancing challenging. There are a number of wearable products that people may use to indicate to others that they want to maintain their distance but find it difficult.

Mass vaccination staff should be aware of these resources and it will be helpful for them to identify a person who may need some additional support.
